

IMPROVE PERFORMANCE. INCREASE ENDURANCE. ENHANCE RECOVERY.

NuliGo® nutritional lipids fuel high-intensity training and competition with a breakthrough plant-based molecule that delivers rapid, sustainable energy directly to the muscle.

Introducing an evidence-based ingredient to support superior muscle performance in athletes at all performance levels.

NuliGo® is a versatile ingredient that can optimize performance and support overall muscle health by itself or combined with other supplements.

It delivers a powerful combination of structured medium—and long-chain triglycerides (sMLCT) that sustain muscles with a powerful and targeted energy source without the jitters, crashes, or GI issues accompanying other supplements.

Pre-, Intra-, and Post-Workout Benefits

NuliGo®, as a novel ingredient, harnesses the power of structured lipids to provide a reliable, long-lasting source of clean energy for peak muscle performance, repair, and recovery. NuliGo® nutritional lipids have been shown to provide:

Direct energy delivery through circulation to muscles bypassing the liver

Supply of a fast energy source to fuel performance

Long-term availability of energy readily accessible to muscles

Designed for Peak Athletic Performance

Even in the most grueling and demanding sports activities, NuliGo® structured lipids provide a powerful and natural solution to elevate performance and optimize results for:

ENDURANCE ATHLETES

NuliGo® nutritional lipids help deliver balanced energy by providing a readily available alternative fuel source that can delay fatigue. This could allow endurance athletes to extend their stamina while its glycogen-sparing effect preserves glycogen stores for those critical moments when athletes need that final push.

PROFESSIONAL ATHLETES

For peak performance in high-intensity competition, NuliGo® lipids are rapidly absorbed and converted into clean, usable energy. They provide the quick bursts of power needed for explosive performance while also aiding in faster recovery, enabling athletes to perform at their best consistently.

HYBRID + STRENGTH TRAINERS

NuliGo® structured lipids are a direct muscle energy source that can support protein synthesis. By aiding protein synthesis, NuliGo® lipids supply long-lasting benefits to bodybuilders and strength trainers through muscle repair and recovery following intense workouts.

Now Available as an Ingredient for Sports Nutrition Products

NuliGo® lipids can be added to:

- ✱ Energy gels
- ✱ Powdered drinks
- ✱ Nutrition bars
- ✱ And more*

**We have tested multiple applications and combinations with other ingredients and are happy to provide development support as needed.*

Available in two formats:

- ✱ Oil
- ✱ Powder (70% oil content)

Easy to Incorporate:

- ✱ Clean taste
- ✱ Easy dispersal
- ✱ No effect on texture or color

Placebo-controlled trials have confirmed the following:

- ✱ Increased power output, leading to enhanced performance
- ✱ Reduced heart rate during strenuous physical activity, boosting endurance
- ✱ Greater resistance to muscle damage, supporting better recovery
