

Flaked Shortenings

Bunge's Flaked Shortenings enhance the texture of **biscuits, pie crusts, pizza dough, flatbreads, scones, sweet rolls, bakery mixes** and other **pastries** through their higher-melt temperature and easy to use format that creates lighter, flakier, or crispier outcomes for food industry professionals. They can also be added to **glazes** and **flat icings** to help with faster crystallization needs.

Bunge's Sustainably Sourced Flake Portfolio Provides:

Texture Enhancements

Our shortenings flakes distribute within the dough to create rich air pockets after baking, leading to a desirable flakiness and tenderness in the final product.

Flavor & Color Enhancements

Portfolio options include varieties with color and flavor added to provide rich, buttery flavor and aroma complimented with distributed color pockets in the final product.

Process Improvements

Our shortening flakes make for easier, cleaner, safer, and more efficient usage than traditional blocks of shortening, streamlining the production process, especially in automated settings where they are easily added and disperse readily.

Melt Profile Adjustments

Our shortening flakes have different melting points and thicknesses, allowing bakers to control the final texture and consistency of the product.

Icing and Nut Butter Stabilization

Shortening flakes can be used as a stabilizer in flat icings or glazes to provide faster set-up and in nut butters to bind liquid oil.
